Terry

Congrats to you and Lynnea. The sap should be flowing here soon. My aunt has 40 acres of sugar maple that produces a lot of syrup. We burn a ton of wood boiling it down, but most of that is brush we clear for habitat improvement anyway.

I'm in Muskegon doing a fair amount of writing and consulting. Spring is finally arriving, but I'll probably be heading back out of state, so I won't be able to enjoy it here. I'll see how much time I can devote to U.P. projects. I've managed to arrange short leaves from work in May and June these last couple years, but most of that was spent downstate. I had to skip the Ottawa BBC both years, and this year is again tentative at best.

Regarding the proposed road, I've attached another batch of Breeding Bird Survey data, retrieved from the Patuxent ftp server. Again, I've extracted material from the first 14 points - covering Wolf Lake Road from US-41 to Brocky Lake. This data was collected by Noel Cutright, a very capable birder from Wisconsin. Unfortunately, I was unable to access data from earlier surveys.

Best of luck.

Brian
